

North American Transportation Statistics

Friday, November 21, 2014 – New three-country data was added to the North American Transportation Statistics (NATS) Online Database in this week's 10th annual website update. The database, a product of the North American Transportation Statistics Interchange, contains comparable transportation-related data available from the United States, Canada, and Mexico in a one-stop online resource. The database covers the following subject areas: demographics, transportation, the economy, transportation safety, transportation's impact on energy and the environment, domestic and international freight activity, domestic and international passenger travel, transportation infrastructure, and vehicles. The NATS Online Database is co-sponsored by the U.S. Department of Transportation's Bureau of Transportation Statistics (BTS), the U.S. Census Bureau, and the federal-level transportation and statistical agencies of Canada and Mexico. With text available in English, French, and Spanish, the NATS Online Database can be found at <http://nats.sct.gob.mx/en/>. Contact Dave Smallen: 202-366-5568.
